

CENTRIX SOLUTIONS, INC.

CentrixSECURE™

Secure Messaging & File Exchange

The current regulatory environment demands that customer data be secured at all times. Sarbanes-Oxley, Gramm-Leach-Bliley and HIPAA impose regulations that need to be addressed, and focusing on email security as well as other communication channels is integral to compliance efforts.

CentrixSECURE™ simplifies compliance by providing a secure “auditable” communication platform that supports secure email/messaging and secure file exchange (i.e. loan documents / Director’s packets). Additionally, the system allows companies to cater to corporate clients by providing a two-way secure communication channel that can be customized to the communication needs of the client. The ability to administer all secure communication via a centralized system with flexible user controls and robust audit reporting makes CentrixSECURE™ a valuable tool to help meet stringent data privacy guidelines.

CentrixSECURE™ Features & Benefits

- Facilitates compliance of state and federal data privacy regulations
- Provides an auditable distribution channel sensitive documents and files
- Supports both outgoing and incoming secure communication
- Security insures message recipients are authorized to view the message
- Integrated virus scanning of all inbound/outbound communication
- Browser-based - no software or plug-in to install on workstations
- Eliminates manual encryption
- Integrated with Active Directory so employees do not have to administer passwords (in-house implementation only)
- Branded for your company
- Can be deployed as an in-house or hosted solution

FileScan Module

The CentrixSECURE™ FileScan module adds additional “backroom” functionality for companies that need to automate routine delivery of files (i.e. lockbox files). Using FileScan, CentrixSECURE™ automatically scans the network for the appropriate files and then automatically delivers the files to recipients via the secure, web-based system. The recipient receives an email that the data is available and then logs in to download the file(s). This process is completely automated for the sending company.
